

Create an App which can be used to get the meanings for Acronyms.

Functional Acceptance Criteria

1. User can enter an acronym or initialism : **Done**
2. User is then presented with a list of corresponding meanings : **Done**

Technical Details

1. Use the API available here to get the meanings for an acronym/initialism: •
<http://www.nactem.ac.uk/software/acromine/rest.html> : **Done**
2. Project must conform to these parameters:
 - Project must be written in Swift : **Done**
 - Use VIPER or MVVM architecture for this specification : **Done (I have used MVVM)**
 - Add unit test case : **Done (I have added only one unit test for validation)**
 - You may use any third-party component for networking module : **Done (I have user native framework (URL Session) API for networking and used only one third party api [Reachability API] for network availability)**
3. Once completed, the project must be posted to Github for review. : **Done (Take clone from URL : <https://github.com/vaniary0215/Acronym.git>)**

All the best ☺
